

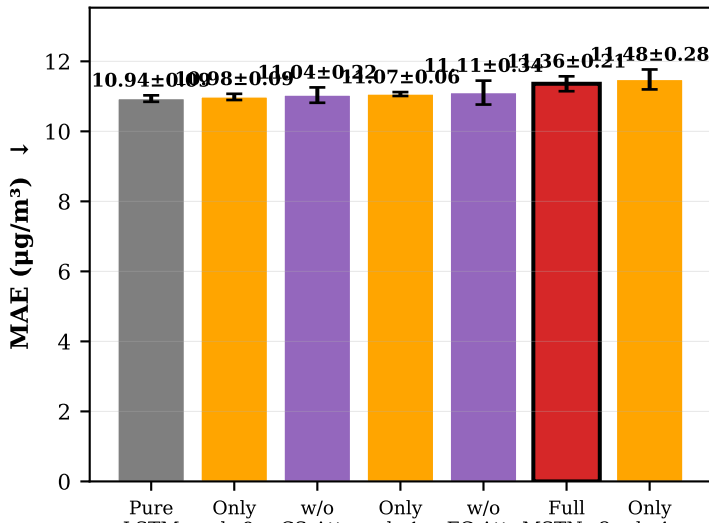

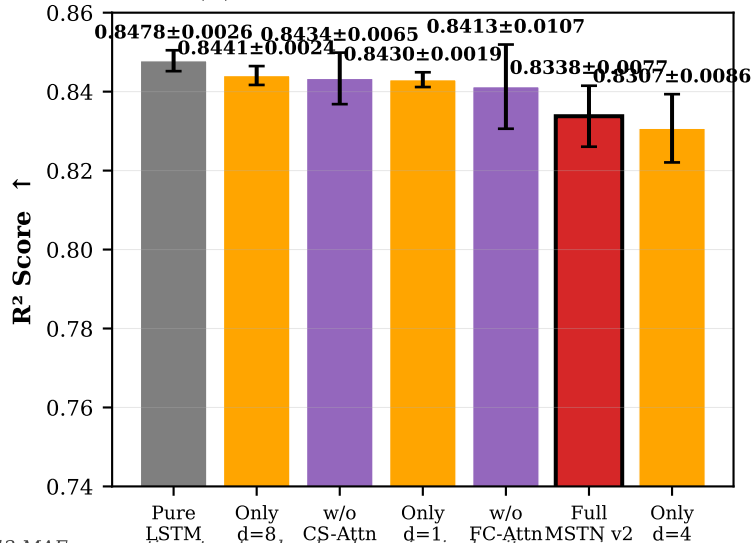

Figure 3. Ablation Study (mean $\pm$ std over 3 runs, 50 Epoch Training)

(a) MAE across Ablation Variants

(b) R² across Ablation Variants

Pure LSTM (30K) outperforms Full MSTN v2 (147K) by $\Delta=0.42$ MAE, suggesting structural redundancy in single-city scenario.

LSTM however has CI coverage 58.9% vs MSTN 88.5% — see Section 5.5.

■ Baseline (LSTM, 30K params) ■ Single-scale variants ■ Module ablation ■ Full MSTN v2 (147K params)
